How much do solar panels cost per square foot?

On average, solar panels cost \$8.77 per square foot of living space, after factoring in the 30% tax credit. However, the cost per square foot varies based on the size of the home. For example, the post-tax credit cost of solar panels for a 2,500-square-foot home is around \$20,000 for a rate of \$7.96 per square foot.

How much does solar cost?

The true cost of solar ultimately varies depending on the installer and their soft costs, how they price equipment and any financing costs. Sales and marketing (customer acquisition) are one of the largest expenses incurred by most solar companies and can account for up to 18% of the final price of a solar panel system.

How much does solar energy cost per watt?

The cost per watt is what you pay for each unit of power of your solar energy system. Think of it a little like "price per square foot" when you buy a house. It helps compare the value of solar energy systems in different sizes. As of publishing, the average cost per watt is \$2.84.

How much does a solar panel cost in California?

California's average cost per watt is currently \$2.47. The difference comes down to efficiency and materials: Monocrystalline panels are made from pure, single silicon crystals; various silicon fragments melted together are used to make polycrystalline panels. Monocrystalline panels have a solid black appearance.

How much does a 5 kilowatt solar system cost?

The average 5-kilowatt (kW) solar panel system is \$14,210 before considering any financial incentives. However, a typical American household needs a system closer to 10 kW to adequately power their home, which costs \$28,241 in 2024. That price effectively drops to \$19,873 after considering the full federal solar tax credit.

Are solar panels cheaper?

Despite being cheaper, the technology has only gotten better. Most solar panels today have efficiency ratings between 19% and 21%, a 48% increase from efficiency ratings in 2010. What factors impact how much solar panels cost?
