

How to make money from photovoltaic energy storage

What is a battery energy storage project?

By Michael Klaus, Partner, Hunton Andrews Kurth Battery energy storage projects serve a variety of purposes for utilities and other consumers of electricity, including backup power, frequency regulation and balancing electricity supply with demand.

Should a storage project be paired with a solar or wind power project?

Pairing a storage project with a solar or wind power generation project could allow projects to charge the storage system rather than deliver power to the grid when market prices for electricity are low (or negative) or when electricity that would otherwise be delivered to the interconnection point would be curtailed.

Are energy storage products more profitable?

The model found that one company's products were more economic than the other's in 86 percent of the sites because of the product's ability to charge and discharge more quickly, with an average increased profitability of almost \$25 per kilowatt-hour of energy storage installed per year.

Does adding batteries to solar increase revenue?

Adding batteries to solar increases revenue in different ways in different places. Daytime electricity, once the most expensive, is now the cheapest - and sometimes "free" - in many markets due to competition from solar power.

Why do companies invest in energy-storage devices?

Historically, companies, grid operators, independent power providers, and utilities have invested in energy-storage devices to provide a specific benefit, either for themselves or for the grid. As storage costs fall, ownership will broaden and many new business models will emerge.

Is it profitable to provide energy-storage solutions to commercial customers?

The model shows that it is already profitable to provide energy-storage solutions to a subset of commercial customers in each of the four most important applications--demand-charge management, grid-scale renewable power, small-scale solar-plus storage, and frequency regulation.
