

Large-scale installation of photovoltaic panels in the wild

How do ground-mounted photovoltaics and concentrating solar-thermal power installations affect wildlife?

Because ground-mounted photovoltaics (PV) and concentrating solar-thermal power (CSP) installations require the use of land, sites need to be selected, designed, and managed to minimize impacts to local wildlife, wildlife habitat, and soil and water resources.

Do photovoltaic solar farms affect global solar power production?

This may further lead to disturbance in the global climate and hence the global solar power production. We aim to quantify the impacts of a large-scale deployment of photovoltaic solar farms in the Sahara on global solar power generation as a pilot case study, and investigate the underlying forcing mechanisms.

What are solar photovoltaic (PV) panels?

Nowadays, several technologies have been developed to make the most of this vast and endless pool of solar energy. At the forefront, solar photovoltaic (PV) panels are made of semiconductors that convert sunlight into electricity.

Do photovoltaic installations affect biodiversity?

However, the currently available evidence regarding the effects of photovoltaic installations on biodiversity is still scarce. More research is urgently needed on non-flying mammals and bats as well as amphibians and reptiles. Solar thermal panels and floating PV installations should also be further investigated.

Are photovoltaic systems a hotspot for wildlife?

Photovoltaic (PV) power generation provides an environmental-friendly alternative to fossil fuels, but the potential impacts of large-scale PV systems on wildlife have become a hotspot. In the North China Plain, floating photovoltaic (FPV) systems have been extensively installed across subsidence wetlands created by underground coal mining.

Do solar thermal panels affect wildlife and ecosystems?

While PV installations and especially ground-mounted USSE facilities have been the subject of most research, the impacts of solar thermal panels on wildlife and ecosystems have yet to be studied. Thus, it remains to be found whether these impacts could be similar to the ones observed in the case of PV panels.
