When does the new solar installation standard become mandatory?

On Thursday, the 19th of May 2022, the new Solar Installation Standard (AS/NZS 5033:2021) became mandatory after a 6-month transition period. For your average bloke on the tools, interpreting Australian Standards is about as fun as a punch in the head.

What is a solar photovoltaic revision?

The revision aims to support users in meeting compliance requirements and promote consumer safety. In the past twenty years, over 3.9 million solar photovoltaics (PV) panel systems have been installed across the country.

What are the requirements for PV array wiring?

Wiring shall be undertaken by a licensed electrician. Plastic cable ties are not to be used as the primary means of support. The PV array wiring shall comply with the wiring requirements of AS/NZS 3000:2018. Cables shall be protected from mechanical damage. Plug connections

Can a 240 kW PV array be used on a high voltage system?

Clause 1.1 has removed the >240 kW exception and instead states that the standard does not apply to PV arrays on large-scale ground mounted PV power plants with restricted access to personnel and connected to dedicated high voltage systems. However, it is noted that the standard should still be used as guidance in the absence of other standards.

Are photovoltaic solar energy systems safe?

The safe and reliable installation of photovoltaic (PV) solar energy systems and their integration with the nation's electric grid requires timely development of the foundational codes and standards governing solar deployment.
